ABOUT ME

Applied Data Scientist with 3+ years of experience working on commercially-facing analytics and predictive modelling initiatives across operations, customer platforms, and enterprise systems. Strong foundation in exploratory analysis, feature engineering, statistical modelling, and time-series forecasting using Python and SQL. Experienced in collaborating with data engineers, software teams, and business stakeholders to translate analytical prototypes into scalable, decision-ready solutions. Adept at documentation, communication, and delivering measurable business impact.

SKILLS

Data Science & Analytics

- Exploratory & Targeted Data Analysis
- Descriptive, Predictive & Prescriptive Analytics
- KPI & Performance Analytics Dashboards
- Feature Engineering & Model Evaluation
- Statistical Analysis & Diagnostics

Machine Learning & Modelling

- Time Series Forecasting (ARIMA, SARIMA, ARIMAX)
- Regression & Classification Models
- Model Validation (RMSE, residual analysis, cross-validation)

Programming & Tools

- Python (pandas, NumPy, scikit-learn, Matplotlib, geospatial, Seaborn)
- SQL, Excel (advanced formulas, pivot tables)
- Power BI, Tableau

Data Engineering / Analytics Ops

- ETL Workflow Design & Optimisation
- Data Quality Checks & Validation
- Reporting Pipeline Automation

EDUCATION

MSc in Data Science and Communication, University of Liverpool, (Sep 2023 - Sept 2024)
2:1 (Merit)

B.E in Mechanical Engineering, Anna University, Chennai, (Aug 2018 - May 2022) 8.56 CGPA

EXPERIENCE

CLAIMS ADVISOR

(Feb 2025 – Present)

Sedgwick UK - Cardiff, UK

- Supported data-driven operational decision-making in a high-volume, SLA-driven environment.
- Performed exploratory and targeted analysis on claims and operational datasets to identify bottlenecks, inefficiencies, and error patterns.
- Designed and maintained structured Data Capture Forms (DCF), improving data quality by 20% and enabling reliable downstream analytics.
- Worked closely with technical and operational teams to investigate complex cases using root-cause analysis and structured problem-solving and generated analytical summaries, and reports to communicate insights and improvement opportunities to stakeholders.

JUNIOR DATA SCIENTIST

(May 2022 – Aug 2023))

Techiegen Ventures - Chennai, India

- Delivered applied analytics and predictive insights for commercially-facing product and operations initiatives.
- Conducted exploratory data analysis on large transactional and operational datasets to uncover trends, anomalies, and performance drivers.
- Built forecasting and predictive models to support demand planning, customer behaviour analysis, and operational optimisation.
- Partnered with engineering teams on data quality checks, cleansing logic, and ETL improvements, reducing reporting refresh time by 15%.
- Translated analytical findings into dashboards, reports, and presentations consumed by product, operations, and leadership teams.

QUALITY ENGINEERING & AUTOMATION

(Feb 2022 – Aug 2022)

Cognizant Technology Solutions - Chennai, India

- Designed and executed automated test scripts for login, search, cart, checkout, account management, and payment interface journeys, improving coverage and reducing manual testing effort.
- Logged defects, tracked outcomes in Jira and collaborated with leads during sprint reviews, developing communication and requirement clarity skills aligned to BA expectations and focused on SDLC, Agile delivery and test engineering.

PROJECTS

Applied Time Series Forecasting – Operational Analytics

- Developed ARIMA and SARIMA models to analyse operational demand trends and seasonality and performed feature engineering, diagnostics, and validation to support forecasting accuracy and business interpretation.

End-to-End Analytics Pipeline Development

- Built Python + SQL pipelines covering data ingestion, cleansing, analysis, and reporting and produced annotated code, documentation, and reusable analytics artefacts aligned with scale-up considerations.
