Github : <https://github.com/ShivaPothe>

Portfolio : shivapothe.github.io/My-Portfolio/

Data Analyst with 3 years of experience working with operational and product data to solve real business problems. I've worked on large datasets (100K+ records), building dashboards, improving reporting, and identifying where processes break down. Comfortable with SQL, Python, Power BI, and Snowflake. I enjoy digging into data, finding patterns, and turning them into insights that actually help teams improve performance and make better decisions.

Experience

Data Analyst - Operational

Sedgwick UK - Cardiff, UK (February 2025 – Present)

- Analysed large-scale claims datasets (100K+ records/month) using SQL and Snowflake to identify key delay drivers, reducing processing time by 15%
- Built and maintained reporting pipelines in SQL and Snowflake, improving reporting speed and data availability by 20%
- Developed Power BI dashboards to track SLA performance, turnaround time, and error trends for operational teams
- Improved data quality by 12% by redesigning Data Capture Forms and introducing validation checks
- Identified patterns driving ~60% of rework cases and helped reduce reprocessing by 10%
- Worked closely with operations and QA teams to turn insights into workflow improvements and better customer handling

Data Analyst

Techiegen Ventures - Chennai, India (May 2021 – Aug 2023)

- Built dashboards to track business and product KPIs, improving visibility for stakeholders by 20%
- Analysed user and transaction data to identify trends, drop-offs, and growth opportunities
- Wrote complex SQL queries (CTEs, joins, aggregations) to process data efficiently and reduce reporting time by 15%
- Performed root cause analysis on performance issues, contributing to a 10% improvement in revenue
- Worked with product and business teams to convert requirements into clear, measurable insights

Technical Skills

- Power BI Dashboard Development , Tableau and Visualization (DAX Modelling)
- SQL (CTEs, window functions, query optimisation)
- A/B Testing, Statistical Analysis
- Snowflake (data querying, transformation, reporting)
- Python (Pandas, NumPy, Matplotlib, Seaborn, Geospatial), Pyspark
- Large Dataset Analysis and Interpretation
- KPI Design, Tracking, and Performance Reporting
- Data Validation, Cleansing, and Quality Checks
- Stakeholder and Client Requirement Gathering
- Operational and Commercial Insight Deliver
- NLP and Sentimental Analysis
- Advanced Excel Modelling and Reporting and MS office package includes M365
- ML Algorithm (ARIMA, ARIMAX)
- Data Pipeline Architecture

Education

MSc in Data Science and Communication,
University of Liverpool
Liverpool, UK (Sep 2023 - Sept 2024)

B.E in Mechanical Engineering,
Anna University
Chennai, India (Aug 2018 - May 2022)

Project

Indian Automotive Market Intelligence & Strategic Pricing Dashboard

- **End-to-End Pipeline:** Architected a custom data pipeline using Python (Pandas) to clean and normalize multi-source datasets (1.4K + listings) across 39 global manufacturers.
- **Strategic Insights:** Developed a Power BI suite to analyze fuel-type distribution and emission shifts, identifying a 50% Petrol market dominance to inform inventory strategy.
- **Pricing Optimization:** Engineered seating-configuration models that improved price-point accuracy by 12% and uncovered high-margin growth segments.
- **Process Automation:** Automated data ingestion with SQL, reducing manual reporting effort by 25% and enabling real-time KPI tracking for 260+ vehicle variants.
- **Tools:** Python, SQL, Power BI (DAX), Power Query.
